key suppliers to the windcube®

Green Energy Technologies will manufacture the WindCube® in Ohio and draw on the resources of leading Ohio-based companies for key components of the product as well as all phases of the installation. Key suppliers include:

Automatic Feed (Napoleon, Ohio): A privately owned company, Automatic Feed is one of the world's premier designers and manufacturers of coil handling and press feeding automation. Automatic Feed handles heavy equipment or component production by providing any combination of assembly, fabrication and engineering – both mechanical and electrical – and machining.

Hanlon Industries (Euclid, Ohio): Hanlon Industries is a custom molder of fiber-reinforced plastics for a comprehensive range of end-product applications on-time and to-spec for industrial and commercial applications since 1959. Hanlon's precision molding facilities enables them to undertake a wide range of end-product fabrication, from short-run prototypes to large-volume production, in a multitude of sizes and in the most intricate of shapes.

MRD Solutions LLC (Eastlake, Ohio): MRD Solutions is a provider of equipment, service and support for the metal processing industry. Founded by Nick Merlini and Al Rapp, two members of the Green Energy Technologies management team, MRD Solutions designs entirely new machines and equipment or re-designs problem components for existing equipment. MRD provided the metalworking and prototype assembly for the WindCube.

Parker-Hannifin Corporation (Cleveland, Ohio): As the worldwide leader in motion and control with unequalled global distribution, Parker provides innovative components and complete systems to customers worldwide. Parker's SSD Drive and Aircraft Wheel & Brake divisions were integral in the development of the WindCube. Parker can provide Green Energy Technologies a global support staff for maintenance and service, as well as best-in-class engineering.

Roth Bros., Inc. (Youngstown, Ohio): Roth Bros. is a leading national HVAC, roofing and energy management company. Founded in 1923, Roth pioneered the first energy management solution to combine HVAC maintenance with energy monitoring to provide significant cost savings. Roth will provide professional installation of the WindCube turbines, from initial site analysis to commissioning. Roth will also provide 24/7 monitoring once the turbine is in operation using an online remote system that it designed for the WindCube, and Roth can provide post-installation preventive maintenance and service on the units.
